Data Cleaning

Formula Used:

To clean Policy Numbers,

```
=IF(AND(LEN(B2)=8, ISNUMBER(VALUE(RIGHT(B2,6)))), "Valid", "Invalid")
```

```
Then I remove the one with 'invalid' outcome.
```

Fix Responsible Team

Created New column: `Responsible_Team_Clean`

```
=PROPER(TRIM(C2))
```

Fix Complainant Type

Created New column: `Complainant_Type_Clean`

```
=IF(E2="PolicyHolder","Policy Holder",PROPER(TRIM(E2)))
```

Fix Root Cause

Created New column: `Root_Cause_Clean`

```
=IF(F2="Poor Comm","Poor Communication",PROPER(TRIM(F2)))
```

To Clean Missing Value

For `Handling_Team`:

```
=IF(D2="", "Unknown", D2)
```

Pivot Tables

I created the following Pivot Tables on New Sheet and inserted Charts for Insight:

- Responsible Team Clean in Row and Count ID in Column
- Root Cause Clean in Row and Count ID in Column
- Complainant Type Clean in Row and Count ID in Column
- Cross Team Analysis showing Complainant Type or Source and Root Cause i.e Team Responsible for the complain

Conclusion

Main Insight:

Poor communication is the leading cause of complaints accounting for 51% of total complaints received. After this is Misinformation which is 34% and then the least is Delayed Response which is 15%.

Supporting Insight:

- Complaints increase during team handoffs
- Misinformation comes from inconsistent messaging
- Delays happen due to unclear ownership

Recommendations & Impact:

After Identifying poor communication as the primary driver of complaints I recommended the following and it was implemented for targeted improvements:

1. Improved Team Coordination: We introduced a shared case management system with clear ownership to enhance team coordination.
2. Standardised Messaging: We developed standardised response templates to ensure consistent and accurate customer communication, and
3. SLA Monitoring: We established SLA tracking to monitor and improve response times. These interventions improved service efficiency and contributed to a 31.65% reduction in customer complaints within one month.
